The colour coding we are currently using is as follows:

Amended orders or stops Retained Orders or stops – no change New working orders Immediate action required Short Sell OPEN POSITIONS:

ROLLOVERS: Code Contract ACTION Action NEW Expiry

Rollover needs to occur because the contract expires on a specified date and needs to be either sold or settled. To Roll a contract over is actually a misnomer - the process is to sell the current contract at market value and buying the next contract at market value.

Trade Risk and Margin

We have been including the Trade Risk in the charts for people to be able to judge the comfortable Position size to fit with their trade risk parameters.

How to read this and adapt to your individual circumstances - the number of CFD's shown is equivalent to the Futures Contract Size. Calculate your own trade risk as a ratio of the posted Contract Trade risk and adjust the number of CFD's accordingly

Name	Cod	e Contract	# of CFD's	Trade Risk	Margin

	HEATINGOILJAN15		42,000 Gallons		USD\$1,852
Lean Hogs	LH	HEG5-Feb 15 No CFD	1 Contract	USD\$1,320	USD\$1,620
Gasoline		RBF5-Jan 15 OLINEUSJAN15		USD\$6,300	USD\$3,850 USD\$1,570

To clear up any confusion over the OIL CFD's OILUK represents Brent Crude (British North Sea Oil and its contract code "LCO" is for London Crude Oil) and OILUS represents Nymex Light Sweet Crude (West Texas Intermediate known as both CL & WTI).

The Futures Contract for Heating Oil was renamed from Heating Oil to NY Harbour ULSD, the Code for this remains the same though - HO. The CFD remains the same name. There has been some confusion over this change.
